

Before the ride home, check your lights.

A.L.E.R.T. · before you roll

Eye-catching

Use bright lights, visible clothing, and a road position where drivers can see you.

Ride ready

Check your bike, helmet, route, weather, and supplies before rolling out.

At a shop, ask for help fitting or checking your lights.

BIKE-SHOP SETUP

Fit and test

Use a working white front light and red rear light. Check local rules for required lights and reflectors. Aim the front light at the road without glare.

Secure mounts; keep lights visible. Switch both on. Check charge or batteries before a ride.

Need help getting or fitting lights? Ask whether this shop or a local cycling group has support available.

Lights may help detection in the right conditions, but cannot guarantee a driver will see or yield.
