FOR STAFF AND DEMONSTRATORS

Partner demonstration guide

One conversation. A better next ride.

Keep every practice stationary. Do not open the door or enter the roadway.

S.P.A.C.E. · C

C — Check before opening a door or turning across a rider's path.

Door: In a secured parked vehicle, check the mirror and look beside and behind toward the traffic side. Keep the door closed during practice. Open only when clear.

Turn: In a stationary diagram or vehicle, identify the rider's path and describe the checks. Wait until the rider has cleared before turning.

ASK FOR A TEACH-BACK

"What will you check? When will you wait?"

Listen for a full check and a clear wait condition.

Bike-light setup and session notes

For bike shops, schools, and community partners

Eye-catching

Use bright lights, visible clothing, and a road position where drivers can see you.

Ride ready

Check your bike, helmet, route, weather, and supplies before rolling out.

Offer a simple setup check

Ask before touching equipment. Invite the rider to show how the front and rear lights attach and switch on. Check power and secure mounting, and help aim the lights without glare using the maker's instructions. Discuss applicable local rules.

If someone asks for help getting or fitting lights, ask whether this shop or a local cycling group has support available. Do not promise that it does.

Record what the session delivered

In your usual program log, note how many people you reached, which practice you demonstrated, whether the teach-back explained the action, and any fitting or access requests.

These are delivery, comprehension, and access outputs. These outputs do not measure driving behavior, crash prevention, or injury reduction.
